

# CERTIFIED DESIGN

Multi-platform AV System

Single-platform Crestron Certified System

Traditional multi-platform systems compromise performance and reliability. They also make service and support more challenging. Ever wonder why your AV system isn't more like your IT system?

By standardizing on a single, validated platform, you can easily deploy scalable AV systems throughout your organization, provide a consistent user experience, manage all the technology on the network, and ensure that everything works flawlessly.

# Here's what you get with a Crestron Certified Design

## END-TO-END "CERTIFIED DESIGN"

- › Engineered and validated by Crestron to ensure premium performance and reliability – confidence that it will work!
- › Single platform scalable system solutions for every room size, room type, or application
